The F-1 is a gas-generator cycle rocket engine developed in the United States by Rocketdyne in the late 1950s and used in the Saturn V rocket in the 1960s and early 1970s.

### **Rocketdyne F-1 - Wikipedia**

The Saturn V (pronounced "Saturn five") was an American human-rated expendable rocket used by NASA between 1967 and 1973. The three-stage liquid-propellant super heavy-lift launch vehicle was developed to support the Apollo program for human exploration of the Moon and was later used to launch Skylab, the first American space station.

Powering the Exascale Era. To solve some of the toughest challenges in the world today, AMD, in conjunction with Cray Inc., Oak Ridge National Laboratory, and the US Department of Energy, plan to create the Frontier system, the next generation of supercomputer capable of an expected 1.5 exaflops of peak processing power.

OneSpin provides the most advanced and robust verification platform to address today's critical IC integrity issues. Our experts are dedicated to solving the toughest next-generation verification challenges and providing solutions that enable design teams to create SoCs that are functionally correct, safe, secure, and trusted.

### **OneSpin: Assuring IC Integrity**

Image sensor. Through advanced mobile imaging technologies, Samsung's ISOCELL image sensors enable DSLR-level photography experiences with excellent color and brightness, fast auto focus and diverse dual-camera solutions on today's mobile devices.

Of course there is some differences of opinion on the exact value of the average density of a spacecraft. One easy figure I've seen in various SF role playing games is a density of 0.1 to 0.2 metric tons per cubic meter (100 to 200 kilograms).
