### PHYSICS NOTES

Quantum tunneling refers to the nonzero probability that a particle in quantum mechanics can be measured to be in a state that is forbidden in classical mechanics. Quantum tunneling occurs because there exists a nontrivial solution to the Schrödinger equation in a classically forbidden region, which corresponds to the exponential decay of the ...

Because the physics is local, the models actually display local scale invariance or conformal invariance, which in two dimensions is a very rich symmetry, represented in field theory by the action of an infinite dimensional Lie algebra, the Virasoro algebra.
