This presentation is used as my teaching material in Universitas Marsekal Suryadarma, Indonesia in 2013. There are some following chapters contain more of basic engineering drawing theory.

### **Engineering Drawing - Definition & Functions, Line Types ...**

An engineering drawing is a type of technical drawing used to define the requirements for engineering products or components. Typically, the purpose of an engineering drawing is to clearly and accurately capture all geometric features of a product or component so that a manufacturer or engineer can produce the required item.

Putting the Line types, Line weights and Line type scales together, we get the following Line type Definitions to use in our drawings. I have amalgamated the definitions from the engineering drawing supplement and the construction drawing supplement together.

### **Technical Drawing Standards: Line Type Definitions.**

Any engineering drawing should show everything: a complete understanding of the object should be possible from the drawing. If the isometric drawing can show all details and all dimensions on one drawing, it is ideal. One can pack a great deal of information into an isometric drawing. However, if the object in figure 2 had a hole on the back side, it would not be visible using a single
