Until the 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract.

In mathematics, a set  $B$  of elements (vectors) in a vector space  $V$  is called a basis, if every element of  $V$  may be written in a unique way as a (finite) linear combination of elements of  $B$ .

Singular Value. There are two types of singular values, one in the context of elliptic integrals, and the other in linear algebra. For a square matrix, the square roots of the eigenvalues of  $A A^T$ , where  $A^T$  is the conjugate transpose, are called singular values (Marcus and Minc 1992, p. 69).
