Parallel line directional coupler (HFSS)

using the High Frequency Structure Simulator (HFSS) [2] and experimental models were built to determine the optimal dimensions of the bidirectional coupler assembly and the orientation of the loop coupler element. Magnetic and electric fields in the coupler were adjusted by modifying the coupling of the fields as well as the capacitance of the coupling loop. INTRODUCTION The rf operating ...

Design of a 3 dB Branch Line Coupler in HFSS

The performance of the directional coupler is usually evaluated by its directivity between port 3 and 4. The directivity is a calculated parameter from isolation and coupling factor and shows how the two components of wave cancel each other at port 4.

waves through a transmission line or a waveguide. The common use of this element is to measure the power level of a transmitted or received signal. The model of a directional coupler is shown in Figure 1. Forward wave Sampled wave Through wave Isolated wave 12 3 4 Figure 1 - Directional coupler model. As seen in the figure, the coupler is a four-ports device. The forward travelling wave
